DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 – 10, 22 and 23, drawn to a film, classified in class 428, subclass 689+.
 - II. Claims 11 – 21, drawn to a method of forming a magnetic film, classified in class 427, subclass 130.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product film can be made by a materially different process, such as one not requiring annealing.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. This application contains claims directed to the following patentably distinct species of the claimed invention: claims 1 – 3 are directed to a magnetic film product, claims 4 – 8 are directed to a film structure product and claims 9, 10, 22 and 23 are

directed to a MR head structure. In addition, claim 16^{/15/11} is directed to a method requiring sputtering.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Claims 1 – 3 and claims 11 – 15 and 17 – 21 are directed to the generic inventions.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicants should elect from the following choices of inventions:

Group Ia – Claims 1 – 3, magnetic film product

Group Ib – Claims 4 – 8, (non-magnetic) film structure product

Group 1c – Claims 9, 10, 22 and 23, MR head product

Group IIa – Claims 11 – 15 and 17 – 21, method of making magnetic film

Group IIb – Claim 16^{15/11}, method of making magnetic film using sputtering

Groups Ia, Ib and Ic are considered distinct species since the disclosed inventions possess distinct structural embodiments and represent an undue burden to examination since they would have separate and distinct classifications. Amendment of claims 4 – 8 to positively recite a “magnetic film structure” would be sufficient to combine Groups Ia and Ib for purposes of examination.

5. No telephone call was made due to the complexity of the restriction requirement (i.e. greater than 2 groups).
